GradPath Atlas — Demo how-to

MKTG 4150 Team Assignment 1 · A 3-minute walkthrough of the deployed web app

Live app: https://marthaweisbender-cpu.github.io/gradpath-atlas/
Repository: https://github.com/marthaweisbender-cpu/gradpath-atlas
Best viewed: desktop browser, window ≥ 1280 px wide (the app is desktop-first by design).

GradPath Atlas is a static single-page app hosted on GitHub Pages. There is no server account to log into: every visitor gets a private workspace stored in their own browser, pre-seeded with fictional demo data. All universities, programmes and people are fictional.

Demo script

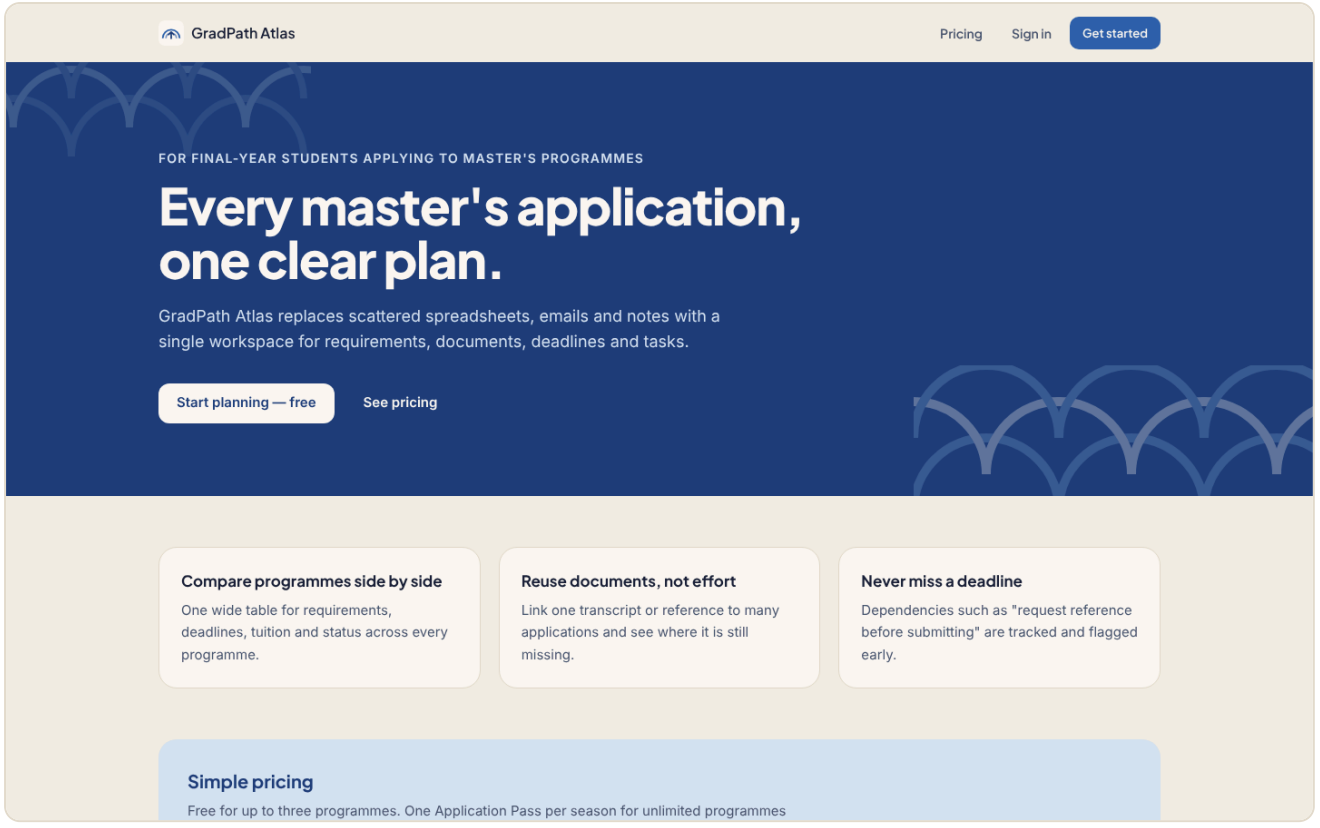

1. **Landing page** → click `Start planning — free`. Sign up with any email and a password of 8+ characters (e.g. `demo@example.test` / `password123`) and tick the data notice.
2. **Dashboard** opens with six fictional programmes: readiness bars, next deadlines with date tiles, and the list of missing documents.
3. **Compare** (sidebar) → sort by Deadline or Tuition, filter by Status, toggle columns. This is the core comparison matrix.
4. Click **MSc Marketing Analytics** → change its status, link a document to a requirement, add a note. Readiness updates immediately.
5. **Tasks** → *Submit Port Meridian application* stays locked until *Request reference from Dr. Okafor* is ticked: task dependencies.
6. **Documents** → set *Personal statement — product track* to `ready`; the reuse matrix and the dashboard update.
7. **Pricing** (top-right link on the landing page, or Settings → Change plan) → `Upgrade (test)` on Application Pass. A test-mode banner appears and the free-plan limit of three programmes is lifted. No payment is taken.
8. **Adviser review** → `Export CSV` or `Print / PDF` for the read-only summary.
9. **Settings** → `Reset demo data` restores the seed between demos; `Erase everything` wipes the account to show sign-up again.

What to point out

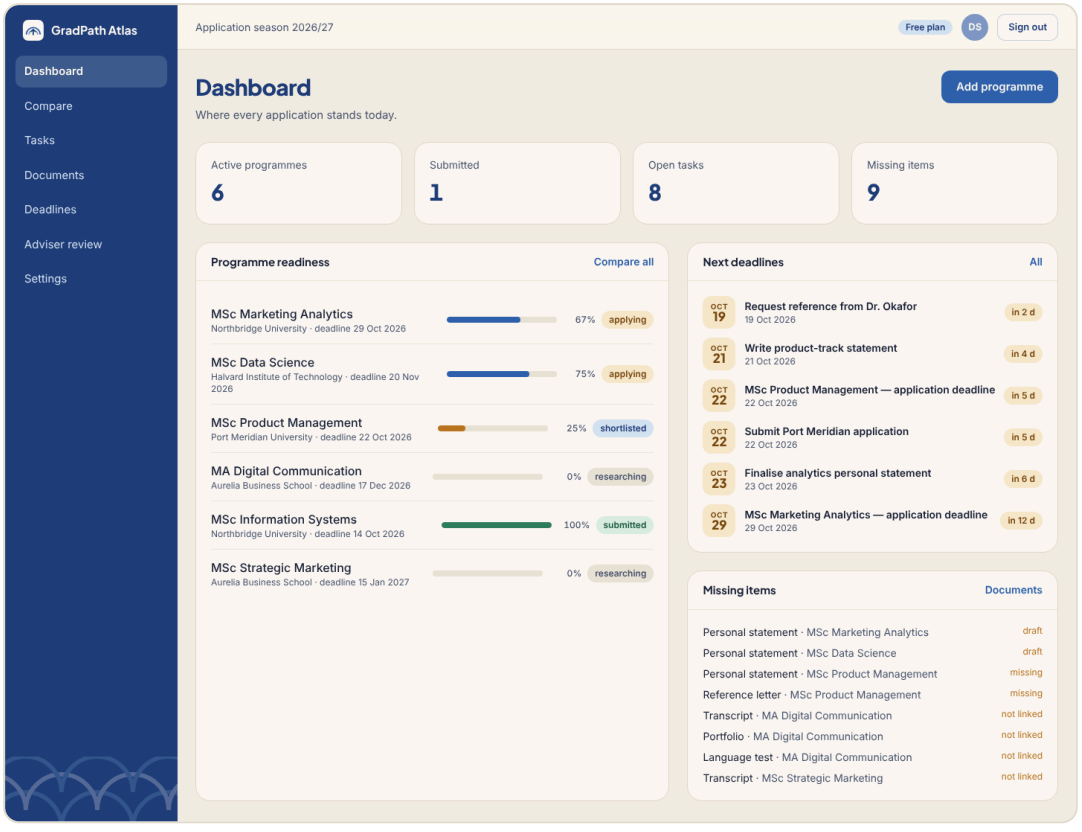

Feature	Where	Why it matters
Comparison matrix	Compare	The desktop-first core value: requirements, deadlines, cost and readiness side by side.
Document reuse	Documents, programme page	One transcript or reference linked to many programmes; gaps are visible at once.

Dependent tasks	Tasks	"Request reference before submitting" cannot be skipped.
Deadline risk flags	Dashboard, Deadlines	Items within 14 days are amber, overdue items red.
Test upgrade flow	Pricing	Monetisation shown without real payments, as the brief requires.
Privacy	Sign-up, Settings	Data notice on sign-up; "Erase everything" implements the right to erasure.

Notes

Seed dates are relative to the day the app is opened, so deadlines always look current. Data never leaves the browser; opening the app in another browser or in private mode starts a fresh workspace. The same checklist is in the repository README.
